5 / 5 submitted

Q1. Harshad number

ANSWER

```
n=int(input())
s=0
t=n
while t > 0:
    s += t % 10
    t //= 10
if n % s == 0:
    print("Harshad number")
else:
    print("not Harshad number")
for i in range(1,501):
    s = sum(int(d) for d in str(i))
    if i % s == 0:
        print(i, end=" ")
```

Q2. GCD

CODE

```
a=int(input("enter first:"))
b=int(input("enter second:"))
while b != 0:
    temp = b
    b = a % b
    a = temp
print("GCD is", a)
```

INPUT

```
24
36
```

OUTPUT

```
enter first:enter second:GCD is 36
GCD is 24
GCD is 12
```

Q3. sum to a target value

ANSWER

```
def find_pairs(list, target):
    s = set()
    p = []
    for i in list:
        if target - i in s:
            p.append((target - i, i))
            s.add(i)
    return p
a = list(map(int, input().split()))
t = int(input())
print(find_pairs(a, t))
```

Q4. Bitwise Operators

ANSWER

```
a = 0b1101
b = 0o25
c = 0x1A
result = (a & b) | c
print(f" a={a}, b={b}, c={c}, result={result}")
print(bin(result), oct(result), hex(result))
print(result >> 2, result << 1, ~result)
```

Q5. binary search

CODE

```
def search(a, t):
    l, h = 0, len(a)-1
    while l <= h:
        m = (l+h)//2
        if a[m] == t:
            return m
        if a[l] <= t < a[m]:
            if a[l] <= t < a[m]:
                h = m-1
            else:
                l = m+1
        else:
            if a[m] < t <= a[h]:
                l = m+1
            else:
                h = m-1
            return -1
    a=[4,5,6,7,0,1,2]
    t = int(input())
    print(search(a, t))
```

OUTPUT
