Q1. Intelligent Customer Feedback Analysis

CODE

```
def analyze(s):
    s=s.lower().strip().replace(".", "")
    p=s.count("good")+s.count("great")
    n=s.count("bad")+s.count("poor")
    if p>n:
        print("positive")
    elif n>p:
        print("negative")
    else:
        print("neutral")
    s=input()
    analyze(s)
```

INPUT

good product

OUTPUT

Q2. Comprehensive Password Strength Checker

CODE

```
def check_password(p):
    u = l = d = s = 0
    for i in p:
        if i.isupper():
            u += 1
        elif i.islower():
            l += 1
        elif i.isdigit():
            d += 1
        else:
            s += 1
    score = u + l + d + s
    if len(p) == 0:
        print("empty password")
    elif score < 4:
        print("weak")
    elif score < 7:
        print("moderate")
    elif score < 10:
        print("strong")
    else:
        print("very strong")
    p = input()
    check_password(p)
```

INPUT

abc@1234

OUTPUT

Q3. Structured Server Log Error Analyser

CODE

```
def analyze(logs):
    errors = []
    for i in logs:
        if "ERROR" in i or i.startswith("ERROR"):
            if i not in errors:
                errors.append(i)
            print("ERRORS:")
            for e in errors:
                print(e)
            logs = []
            n = int(input())
            for i in range(n):
                logs.append(input())
            analyze(logs)
```

INPUT

```
4
INFO server started
ERROR file missing
ERROR file missing
WARNING low memory
```

OUTPUT

(no output)

Q4. Email Domain Frequency Analyser

CODE

```
def analyze(emails):
    domain = {}
    for e in emails:
        if "@" in e:
            d = e.split("@")[1]
            domain[d] = domain.get(d,0) + 1
            max_domain = max(domain,key=domain.get)
            print(max_domain)
            print(domain[max_domain])
            n = int(input())
            emails = []
            for i in range(n):
                emails.append(input())
            analyze(emails)
```

INPUT

```
5
abc@gmail.com
xyz@yahoo.com
pqr@gmail.com
test@gmail.com
hello@yahoo.com
```

OUTPUT

(no output)
