Q1. Operators in Python

ANSWER Operators in python are symbols used to perform operations on variables and values
Types of operators:

Arithmetic-+,-,*,/(example: 10 +5=15)

comparison-==,>,<(example:10>5 true)

logical-and,or,not(example:true and false)

assignment-=,+=(example:x =5)

bitwise-& (example:5 & 3)

membership-in,not in (example 'a' in "apple")

Q2. Operators

ANSWER A for loop is used to iterate over a sequence (list, tuple, string or range)and repeat for fixed number of times
example
for i in range(5):
print(i0)

Q3. for and while loop

ANSWER A for loop is used to repeat a block of code for each item in a sequence(string ,range etc.)
Awhile loop repeat a block of code as a long as a given condition is true

difference:

For loop: used when the number of iteration is known

while loop: used when the number of iteration depends on a condition

Q4. range()

ANSWER The range() function generates a sequence of number and its commonly used un a for loop
range(5) 0,1,2,3,4
range(1,6) 1,2,3,4,5
range(1,10,2) 1,3,5,7,9
difference:
range(5) starts from 0
range (1,6) starts from 1 and ends before 6

Q5. String

ANSWER A string in python a sequence of characters enclosed in string (' ') double or trible(" ") quotes
Astring is immutable which is mean its contents cannot be changed

Q6. String Slice

ANSWER "ytho"
"nohtyp"
"pto"
"hon"

Q7. List

ANSWER A list is a collec tion of items enclosed in squence in square brackets[]
Difference:
List mutable,uses[],can store difference data types.
string: immutable,uses quotes" " or' ',stores only characters.

Q8. List Slice

ANSWER ForL =[30,40,50,60,70]
L[2:6] [30,40,50,60]
L[:4] [10,20,30,40]
L[:2] [10,30,50,70]

Q9. Index

ANSWER positive indexing and negative indexing in python

Q10. length

ANSWER len() function and the count() method
